CMSC-621, PROJECT 2 (DISTRIBUTED LOCK)
SHREYA DATE (PQ56297)

STEPS TO RUN

Daemon:
1. Open terminal 1
2. Traverse to src dir
3. Build server and client using make (make has 2 targets)
4. Run server using ./server <port_num>

Servers/Processes in a Distributed system:
1. Open terminal 2
2. Traverse to src dir
3. Create client using make
4. Run client using command ./client <port_num> <num_of_clients_to_spawn>

meraki.txt is the file which contains the counter updated by each client thread.
